The visionaries who created ROS developed a framework for robotics centered on the commonality of robotic systems and exploited this commonality in ROS to expedite the development of future robotic systems.

ANYbotics AG is an ETH Zurich spin-off developing new solutions for mobile robots. Our quadrupedal robot is equipped with an inspection sensor payload to provide autonomous visual, thermal and acoustic inspection in challenging environments such as industrial sites, power plants, and subterranean systems.

### **About ANYbotics**

A robot is a machine especially one programmable by a computer capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within.

Open-source robotics (OSR) is where the physical artifacts of the subject are offered by the open design movement. This branch of robotics makes use of open-source hardware and free and open-source software providing blueprints, schematics, and source code.

The game of Pong is an excellent example of a simple RL task. In the ATARI 2600 version we™ use you play as one of the paddles (the other is controlled by a decent AI) and you have to bounce the ball past the other player (I don™t really have to explain Pong, right?).
