International Journal of Materials Science and Applications (IJMSA) is an interdisciplinary journal devoted to experimental and theoretical research on the synthesis, structure, properties and applications of materials. Particular interest is placed on materials having relevance to microelectronics, photonics and micromachining. IJMSA ...

1.1. Nanofiller for polymer composite. A polymer composite is a multi-phase material in which reinforcing fillers are integrated with a polymer matrix, resulting in synergistic mechanical properties that cannot be achieved from either component alone. As the most used polymer composite material, fiber reinforced polymer (FRP ...

A composite material (also called a composition material or shortened to composite, which is the common name) is a material made from two or more constituent materials with significantly different physical or chemical properties that, when combined, produce a material with characteristics different from the individual components.

The aim of the journal is to publish papers that advance the field of computational materials science through the application of modern computational methods alone or in conjunction with experimental techniques to investigate existing inorganic and organic materials as well as to discover new materials.

Advanced composite materials (ACMs) are also known as advanced polymer matrix composites. These are generally characterized or determined by unusually high strength fibres with unusually high stiffness, or modulus of elasticity characteristics, compared to other materials, while bound together by weaker matrices.
